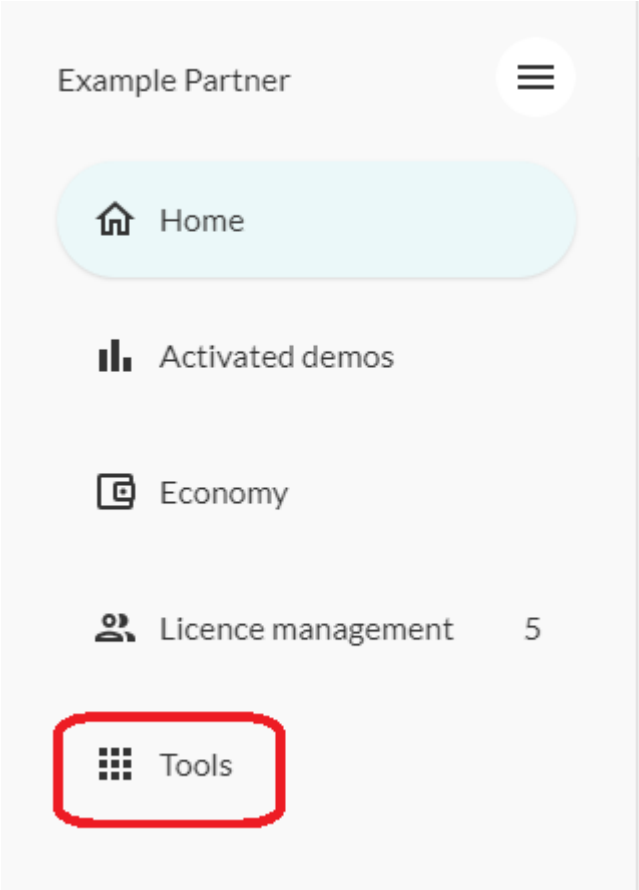
Specify a standard price for products with price upon request

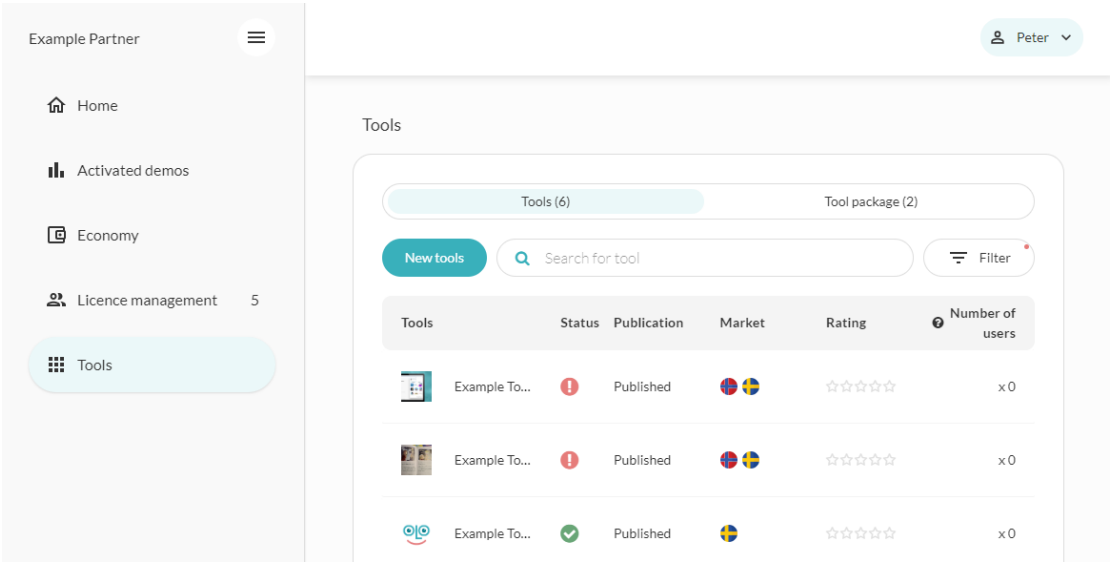
Ulf Kronsell - 2024-03-15 - Create New Tool With Products

As requested by customers it's now possible to set a standard price per user for a product, enabling customers to directly calculate the discount received from the standard price when making a purchase through the Skolon App Store

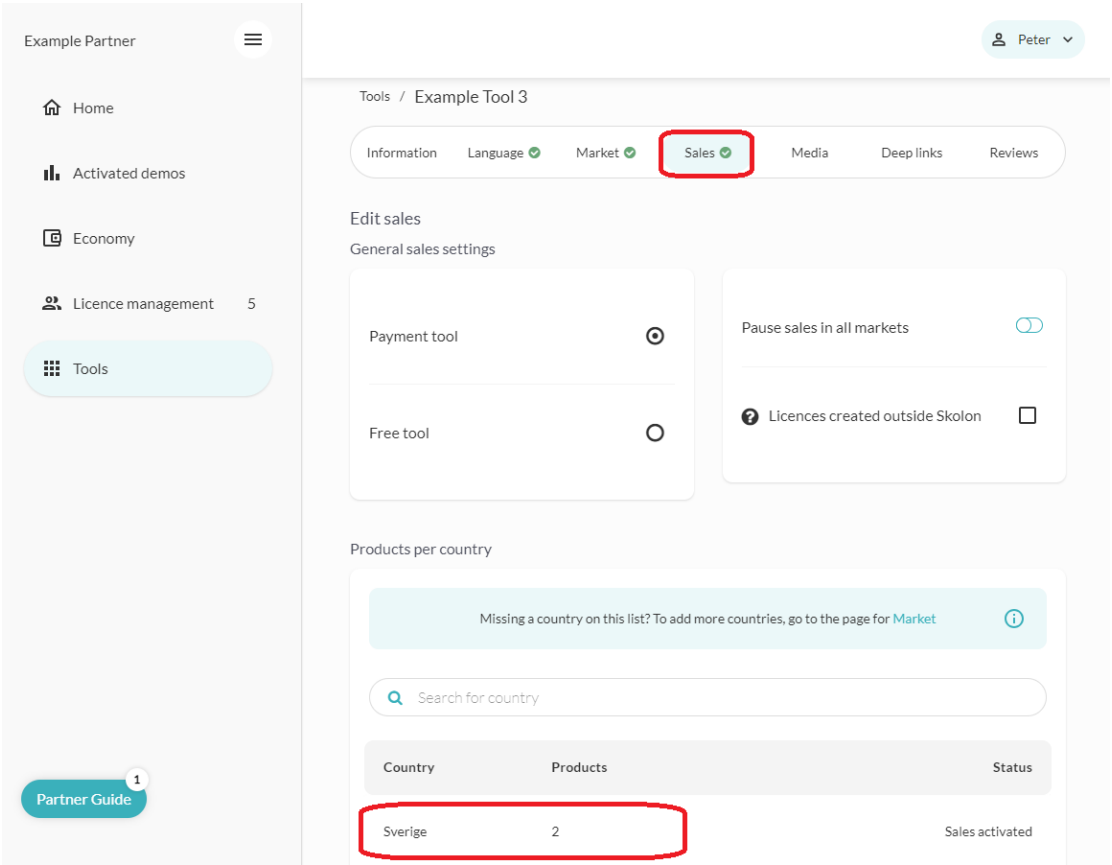
To set a standard price, click **Tools** in the menu.



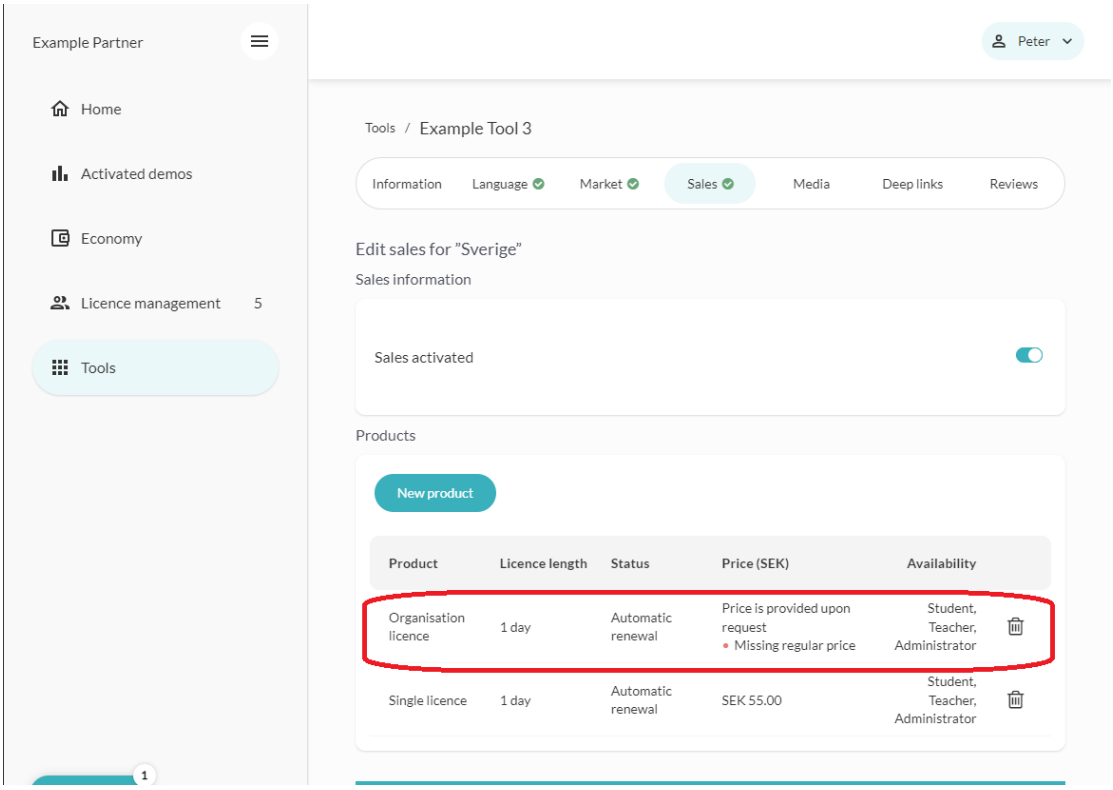
Click the tool you want to add a standard price for.

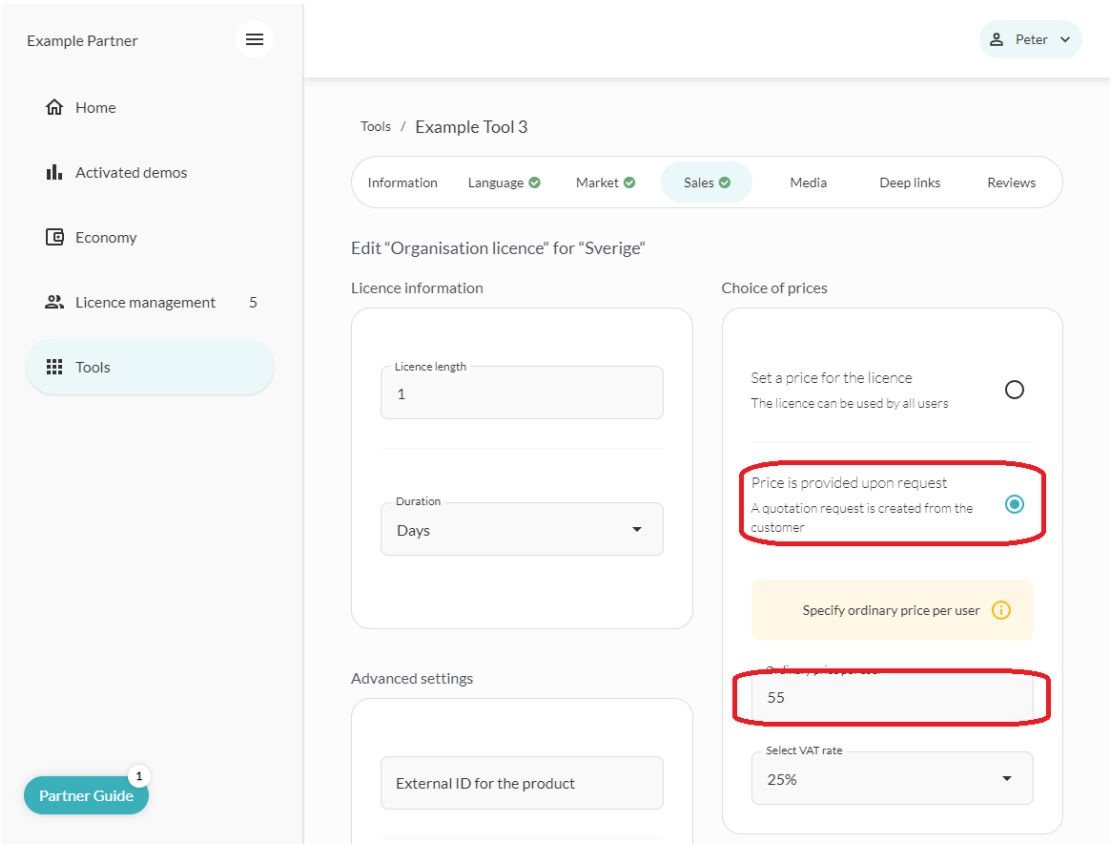


Click **Sales** and then click the applicable market.



Click the product you want to edit.



Make sure that **Price provided upon request** is selected. Enter the standard price and select which VAT rate applies.


IMPORTANT! Don't forget to scroll down to the bottom of the page and click **Save**.
